SUMMARY

Dedicated Computer Engineer with strong experience building production-grade AI-driven applications within the healthcare, education, and logistics sectors. Proficient in full-stack development with Python, FastAPI, and React. Skilled in Generative AI engineering RAG pipelines, LangChain, LLM APIs, Prompt Engineering, Vector Search, PyTorch, and Agentic AI. Proven track record of delivering innovative solutions and committed to staying up-to-date with the latest advancements in artificial intelligence.

EDUCATION

Fr. Conceicao Rodrigues College of Engineering

Bachelor's Degree

CGPA: 8.4/10

2023 – 2027

PROJECTS

Vidya: AI Academic Ecosystem

[Link to Github](#)

- Built a RAG-powered CBSE tutoring platform with automated failover between Gemini and Groq for 100% uptime across 50K+ indexed educational documents.
- Engineered the COMPASS Framework (adaptive mastery-sequencing engine) using Knowledge Graphs for automated grading and personalised learning paths.
- Integrated PaddleOCR for handwriting recognition; Firebase RBAC for secure multi-role dashboards (student/parent).
- **Stack:** Python, LangChain, Pinecone DB, FastAPI, React, Firebase, Prompt Engineering, Vector Search

GitHub Automation Bot

[Live Demo](#)

- Built a production-shaped GitHub automation bot with GitHub OAuth sign-in, a repo-connect flow that provisions webhooks per repository, and webhook ingestion secured by deliveryId idempotency and signature verification.
- Designed rule-driven actions for labels, comments, and Slack notifications, plus a retry sweep for failed action logs and dashboard pages for connected repos and action history.
- **Stack:** Next.js 14, Auth.js, Prisma, PostgreSQL, Octokit, Slack API, Vercel

Codebase X-Ray: AST-Driven Architecture Analysis Platform

[Live Demo](#)

- Built a 100% private, AST-driven static analysis platform that parses any local repo or GitHub URL to auto-generate evidence-based system design topologies, layer mappings, and blast-radius impact diagrams.
- Engineered an interactive “what-if” refactoring simulator predicting broken imports and ripple effects in real-time, plus a 1-click auto-fixer that detects missing `process.env` references.
- Shipped one-click Mermaid.js architecture doc export and a GitHub Actions PR-guard workflow that blocks pull requests introducing circular dependencies.
- **Stack:** React, Node.js, Express, AST Parsing, Mermaid.js, GitHub Actions, Vercel

SKILLS

Languages: C, C++, Python, JavaScript, HTML, CSS, SQL

AI / GenAI: LangChain, RAG, LLM APIs, Prompt Engineering, PyTorch, Hugging Face, Pinecone DB, Vector Search, Agentic AI, Gemini API

Full Stack: React, Tailwind, FastAPI, MongoDB, PostgreSQL, Firebase, REST APIs

Tools: Git, GitHub, Vercel, Streamlit, VSCode, Docker (basic)

CERTIFICATES & ACHIEVEMENTS

Finalist – Bit N Build Hackathon (2025)

Google Cloud – Google Cloud Career Launchpad, Cloud Engineer Track (Mar 2026)

AWS Academy – AWS Academy Graduate, Cloud Architecting (Apr 2026)

HackerRank – SQL Basic & Intermediate (2025)

Simplilearn – Introduction to Java Spring Framework (2025)
